| | | | |
| | A magnet to stabilise the seconds wheel has been added. New version from date code: 10/04 | | |

The policy for local repair is:

We recommend a movement exchange (see Working Instruction no. 31).

In case of local repair, the exchange or replacement of spare parts must be made according to the movement version (see engraving on main plate). Example: On a movement calibre 1538B, the parts to exchange or replace are those mentioned under version 1538B.

Technical modifications on version «B»

Calibre 1538A + 1538B

Application:

When repairing a version A or B, the new components must be used systematically.

Goal of the technical modifications:

Improve the accuracy of the seconds hand jump in relation to the dial markers.

Ref. 722143030012 Ref. 7221538B30027* Old seconds wheel (grey) and intermediate wheel (yellow)

Version D

Kit Ref. 7221530D9999* New seconds wheel (yellow) and intermediate wheel (grey).

Reduction of the play of the wheel engagement to improve seconds hand jump.

New version from date code: 42/07

Improvement of the seconds jumps on calibre 1538D

In order to better meet our customers requirements, the jump of the seconds hand on calibre 1538D has been further improved.

Technical modifications on version «D»

Calibre 1538D

Application:

When repairing a version D, the new components must be used systematically.

When ordering one of the two components individually, an automated order of KIT ref. 7221530D9999* is issued. It comprises:

Seconds wheel ref. 7221530D30027*
Intermediate wheel ref. 7221530D30012

Goal of the technical modification:

Further improve the accuracy of the seconds hand jump in relation to the dial markers, including a reduction of the wheel engagement play.

Interchangeability

New and old wheel executions must not be mixed; there is a serious risk of blocking.

Calibre version 1538C was produced with old and new wheel executions. We therefore suggest to systematically using new wheels from the KIT ref. 7221530D9999*.

Major points

Information on the battery

The used battery depends always on the case reference.

| Ref. 1449936 | |

1.0 Information on height of hands

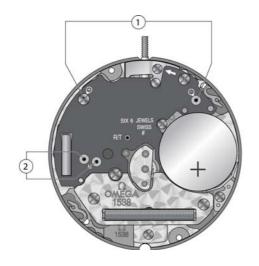

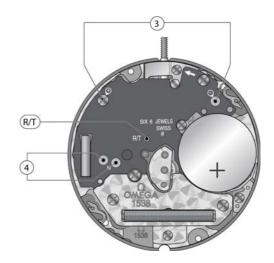

1.1 Runners for hand setting and hand setting force

| Description | Movement holder for hand setting | No of runners for hand setting | Minimum force (N) | Maximum force (N) | Support (jewel) |
|--------------|----------------------------------|--------------------------------|----------------------|----------------------|--------------------|
| Hours hand | | 4 | 10 | 55 | no |
| Minutes hand | 507 0023 | 2 | 10 | 55 | no |
| Seconds hand | | 1 | 10 | 30 | yes |

Fig. 2.0

2.0 Electrical tests

| Pos. | Setting of apparatus | Measurement | Test | Remarks |
|------|--|---|--|---|
| 1 | 2 V (Ri \geq 10 k Ω / V) | 1,55 V | Battery voltage | Measured with battery |
| 2 | $\begin{array}{c} 1 \text{V} \\ \text{(Ri } \geq 10 \text{k} \Omega / \text{V)} \end{array}$ | For Witschi Q 6000: the motor LED lights up at each impulse. | Impulses per minute at the integrated circuit output 1 per second. | Measured with checked battery. |
| | | 1,20 µA | Movement consumption | Measured without battery, external supply, 1.55 V |
| | 10 μΑ | Jump of four steps every four seconds until supply voltage < 1,30 V | EOL. Consumption higher than normal. | Measurement without battery, with supply voltage < 1.40 V, EOL function after ~ 2 minutes. |
| 3 | | 0,5 μΑ | Operation of the time setting stem switch in position 3 | Measured without battery, external supply, 1.55 V. |
| | 2 V | ≤ 1,30 V Bring the R/T point and track ©. Control of motor with 8 steps/ sec at 1.55 V and 32 steps/sec under voltage ≤ 1,30 V (EOL). | Lower limit for operating voltage. | Measured without battery, variable external supply, starting with 1.55V, continually reduce voltage until movement stops. |
| 4 | •10 kΩ | 1,3 - 1,8 kΩ | Coil continuity | Magazzad without battary |
| 5 | 200 μΑ | 110 - 155 μΑ | Coil isulation | Measured without battery. |

 $[\]bullet$ Ohmmeters with measuring voltage greater than 0.40V inappropriate; recommended voltage 0.20V. Ambient temperature 20°C.

Adjustment of the operation by inhibition. The operation can only be measured with a device used to measure intervals of 60 seconds or multiples of 60 seconds. The rate must be measured with ambient temperature between 20°C and 30°C .
